Simple Calculator Lab

In this programming Lab, you will create a simple Calculator web site, which can add, subtract, multiply, or divide two numbers. Each of the two numbers will be entered by the User in a text box. The operation will be selected from a drop-down list. When the User clicks the Submit button, the screen will disappear and be replaced by the calculated result in a message like the following:

The Answer is: 57

There will also be a piece of text "Another calculation" that links the User back to the opening web page of the calculator.

You should implement this web site using node.js. As a starting point for your program, use the node.js Simple Adder shown in the slides for Exercise N4. For this web site, you should not have any javascript code running in the Browser.
